U.S. EPA/Ohio EPA/ORSANCO Responses to Comments Received
on Proposed Revised Original Lower Mill Creek Partial Remedy

Name	Subject	Comments	Responses
Samantha Brockfield	(010115319) Hamilton County CSO Public Comments	<p>I am writing to request that the Lower Mill Creek Sewer Overflow Proposed Remedy be implemented using a High Road Agreement. This agreement should result from a multi-stakeholder process brokered by Hamilton County and result lay out specific goals related to the quality and accessibility of economic opportunities associated with MSD's Remedy-related projects. The Agreement should lay out strategies for advancing these goals, establish a mechanism for implementing the agreement, and define a process for evaluating progress towards goals. Key metrics should include wages and benefits, workforce and business diversity, training and career development, and environmental benefits. These agreements should provide opportunities and benefits for residents and businesses of neighborhoods where stream restoration, daylighting and other sustainable stormwater projects are to take place.</p> <p>"High Road Agreements can offer enormous benefits to a broad range of stakeholders and local economies. They create high-quality jobs and career pipelines that can help stabilize communities hit hard by high unemployment. They allow governments and taxpayers to amplify the impact of their program dollars. They lead to the formation of new coalitions that help increase the size and strength of the green economy. Finally, HRAs can expand the capacity of contractors, especially Historically Underutilized Businesses (HUBs)." (Green for All)</p> <p>Thank you for your time and consideration of this important matter.</p>	<p>The scope of the Regulators' review and decision on the Revised Original Lower Mill Creek Partial Remedy (LMCPR) does not encompass issues related to jobs and economic opportunities. The scope of the Regulators' review under Section A.2.a of the Wet Weather Improvement Program (WWIP) is limited to whether the proposed Revised Original LMCPR "provides equal or greater control of CSO annual volume as the Original LMCPR and is completed by the Phase 1 End Date." As explained in the response to comments received from Marilyn Wall, Defendants' proposal meets these criteria. As a point of information, MSD has estimated that implementation of the Revised Original LMCPR by 2018 will provide employment opportunities equivalent to 900 full-time jobs.</p>

Name	Subject	Comments	Responses
David Leonard	(012125251) Hamilton County CSO Public Comments	I love the idea of the green infrastructure solution for the Lower Mill Creek Sewer Overflow problem. It makes sense to get the storm water out of the system, and simultaneously create new engaging spaces for the community! Outstanding idea and plan!	The Regulators acknowledge this letter of support for the Revised Original LM CPR.
Maston Klein	(012191521) Hamilton County CSO Public Comments	<p>To whom it may concern,</p> <p>I think that the updated or alternative control plan instead of the tunnel-based solution is a more viable plan, not only for the community around it but also for the environment in general. The new plan will bring the previously existing stream back above ground, which will create new park space, and invest in the South Fairmount community, which has been a blighted neighborhood for years. It will also allow for the restoration of the natural wetlands that existed before and create a home for the local wild life.</p>	The Regulators acknowledge this letter of support for the Revised Original LM CPR.
Allison DeGraaf	(013214230) Hamilton County CSO Public Comments	As a resident of Westwood and frequent commuter on Queen City Avenue, I am excited by the plans for a green alternative to the storm water issue. I think this project could dramatically improve one of the major access routes to the west side and give a boost to a struggling community. You have my vote!	The Regulators acknowledge this letter of support for the Revised Original LM CPR.
Leslie S. Evelo, Ph.D.	(014093512) Hamilton County CSO Public Comments	<p>I strongly feel that the proposed plan for lower Mill Creek is a wonderful idea, as it both addresses the sewer overflow issue and improves the surrounding area from both an aesthetic and an ecological perspective. A tunnel, especially since it would cost more, would do nothing to improve the surrounding neighborhood, whereas the currently proposed substitute plan stands to benefit the area in a variety of ways. I support this plan and am urging fellow citizens to do the same.</p> <p>Leslie Evelo, Ph.D. Westwood Resident</p>	The Regulators acknowledge this letter of support for the Revised Original LM CPR.

Name	Subject	Comments	Responses
KimberlyFrondorf	(014165338) Hamilton County CSO Public Comments	Myself and my family feels strongly that our community should move forward on the plans of green alternative that will also improve our neighborhoods. We understand that the default or alternate plan involves twice the funding. What's the question? Go green, save money, improve the neighborhood and have a healthier city!!! we say NO on the sewer tunnel. Thank you. I also work in South Fairmount so I'm there every day. I'd love to see concrete jungle transformed into green space!!!!!!!	The Regulators acknowledge this letter of support for the Revised Original LM CPR.
Joe Smith	(016133905) Hamilton County CSO Public Comments	<p>The proposed Revised Original does not appear to be sustainable as it proposes creating multiple new stormwater discharges. The information provided appears to indicate that these new stormwater discharges will cause or contribute to Water Quality Standard exceedances and therefore will need to be addressed at additional cost in the future to comply with the Clean Water Act.</p> <p>How will EPA be regulating these new stormwater discharges so that this solution does not simply trade one pollution source (CSOs) for another (stormwater discharges)? Will these proposed stormwater discharges be exempted from complying with water quality standards?</p> <p>How has this future cost of addressing the pollution from the new stormwater discharges been factored into the overall solution cost? How will the ratepayers be protected from having to spend more money later to treat the stormwater discharges since the Mill Creek doesn't meet water quality standards?</p>	The Revised Original LM CPR will involve strategically separating combined sewers in several sewersheds to relieve the overloading of the combined system and reduce CSO discharges. Wet weather flows diverted from the combined sewer system will be managed through a network of separate storm sewers and the Lick Run valley conveyance. Stormwater control measures are included as part of the Revised Original LM CPR to help sustainably manage the separated stormwater. For example, there will be eight detention basins in the Lick Run/South Fairmont service area that will detain stormwater to help slow the release of water to the stormwater system and Mill Creek, and to help reduce the concentrations of sediment, nutrients, and other pollutants in the stormwater. The stormwater system and discharges will be managed as part of the local Municipal Separate Storm Sewer System (MS4) program. The local MS4 program is covered under a NPDES discharge permit issue by the Ohio EPA. Stormwater discharges will need to comply with the MS4 permit. The stormwater discharges will need to be managed consistent with the applicable water quality standards for the local water bodies. Defendants have analyzed and projected the maintenance needs for the stormwater system elements that will be created as part of the Revised Original LM CPR. The costs for the Revised Original LM CPR including the CSO controls and separated stormwater controls, and including construction/implementation costs and maintenance costs, were determined to be less than the projected construction and maintenance costs for the default remedy.
No name	(021102044) Hamilton County CSO Public Comments	As evidenced on both the MSDGC Hamilton County websites, a substantial effort has been made to support the Revised Original Lower Mill Creek Partial Remedy, which will provide a number of benefits for lower cost. As a rate payer I feel this is the best approach moving forward on a complex wet weather problem that requires a solution now rather than later.	The Regulators acknowledge this letter of support for the Revised Original LM CPR.

Jim Berns	(040164916) Hamilton County CSO Public Comments	<p>Sudhir Desai Environmental Engineer Water Division U.S. EPA Region 5 (WC-15J) 77 W. Jackson Blvd. Chicago, IL 60604-3590</p> <p>Part of the justification for the project is to maintain the areas pre-development hydrology to prevent flooding.</p> <p>Why doesn't the government stop subsidizing flood insurance for people and businesses that live in flood prone areas? It is virtually impossible to eliminate increased runoff to the level when there were only native Americans in the drainage area. If people don't live in the flood plain who cares if it floods?</p> <p>When there is a storm water event aren't the pollutants diluted so much that they fall under the allowed parts per million?</p> <p>Why not let individual home owners and businesses create their own waste water collection system and hire a contractor to haul them away and treat them and give them a discount on their sewer bill?</p> <p>Local politicians have passed legislation limiting workers on the \$3Billion dollar project to be unfairly limited to union workers prohibiting 80% of Ohio workers from participating.</p> <p>Present system works 95% of the time why spend billions to get the last 5% or less?</p> <p>I think the purpose of projects like this are to bankrupt our country and have Americans live in poverty.</p> <p>Jim Berns</p>	<p>The default remedy (i.e., the tunnel solution) was included as a component of the Cincinnati area Wet Weather Improvement Program (WWIP) as a first-step component of an overall plan to reduce CSO discharges to Mill Creek and other local water bodies. CSOs occur when the combined sewer system is overloaded by the combination of sewage and rainwater, and the combined system discharges untreated combined sewage to local water bodies, resulting in water quality impacts and human health risks. The Revised Original LMCPR has been proposed by Defendants as a less costly way to achieve the same or greater control of CSO annual volumes as the default remedy for the Lower Mill Creek sewersheds. The Revised Original LMCPR potentially can provide some additional local benefits, beyond those that will be realized through the default remedy, in terms of helping to reduce localized flooding. For example, the strategic separation of sewers in several sewersheds creates additional carrying capacity in the sewer system and thereby can help prevent local street flooding or basement back-ups. The Lick Run valley conveyance will be designed to provide that the green corridor will function as a floodway in very large storm events and thus help prevent flooding of nearby streets, homes, and businesses, and also help relieve potential flooding along Mill Creek. The primary purpose of the Revised Original LMCPR is not to prevent flooding, but rather to help reduce CSOs, protect local water quality, and reduce potential human health risks. The Revised Original LCMPR will nevertheless provide some local flood risk reduction benefits.</p>

Linda L. Hagemann	Comment Received on Lick Run Component of LMCP	See "Hagemann Letter to EPA re Lick Run.pdf"	<p>The scope of the Regulators' review and decision on the Revised Original LMCP does not encompass issues related to property acquisition and relocation. The scope of the Regulators' review under Section A.2.a of the WWIP is limited to whether the proposed Revised Original LMCP "provides equal or greater control of CSO annual volume as the Original LMCP and is completed by the Phase 1 End Date." As explained in the response to Marilyn Wall's comments, Defendants' proposal meets these criteria As a point of information, Defendants have indicated it is implementing the following measures as part of its property acquisitions in the Lick Run/South Fairmont service area: Properties will first be appraised. Under Ohio law MSD must follow appraisal guidelines established in the Uniform Standards of Professional Appraisal Practice. The price to be paid for the property will reflect the fair market value of the property established through the appraisal. In addition, the property owner will in most cases be eligible for relocation benefits. MSD will be following the federal guidelines established under the Uniform Relocation Act (URA) in determining the amount of the relocation benefits to be paid. Through the City Defendants are offering a Supplemental Assistance and Benefits program for homeowners, residential property owners and residential tenants. These supplemental benefits are in addition to those offered through the URA and do not reduce any URA benefits to which home owners, residential property owners or residential tenants may be entitled. The assistance and supplemental benefits offered through this program will help minimize the inconveniences and financial impacts on those who are displaced by a CSO project. Implementation of the Revised Original LMCP will require that a number of homeowners and businesses will need to move. However, the implementation of the valley conveyance in the Lick Run/ South Fairmont neighborhood potentially should provide socio-economic benefits to this neighborhood. The green corridor potentially will be an amenity for residents and potentially could be a catalyst for economic redevelopment. The enclosures with this letter included several comments developed by the Sierra Club in the fall of 2012. The Sierra Club has continued to work actively on the review of the Revised Original LMCP and submitted an updated comment letter. See the responses to comments from Marilyn Wall and E. John Eck.</p>

Dennis Smith		See " Dennis Smith Comments on Revised Original LM CPR.pdf"	<p>The scope of the Regulators' review and decision on the Revised Original LM CPR does not encompass issues related to property acquisition and business relocation. The scope of the Regulators' review under Section A.2.a of the WWIP is limited to whether the proposed Revised Original LM CPR "provides equal or greater control of CSO annual volume as the Original LM CPR and is completed by the Phase 1 End Date." As explained in the response to Marilyn Wall's comments, Defendants' proposal meets these criteria.. As a point of information, Defendants have indicated they are implementing the following measures as part of their property acquisitions in the Lick Run/South Fairmont service area: Properties will first be appraised. Under Ohio law MSD must follow appraisal guidelines established in the Uniform Standards of Professional Appraisal Practice. The price to be paid for the property will reflect the fair market value of the property established through the appraisal. In addition, in most cases the property owner will be eligible for relocation benefits. Relocation benefits help cover items such as moving expenses. MSD will be following the federal guidelines established under the Uniform Relocation Act (URA) in determining the amount of the relocation benefits to be paid. In addition to these benefits, the City will be offering a Supplemental Assistance and Benefits program for owner-occupied businesses, business tenants and property owners who lease to businesses. These supplemental benefits are in addition to those offered through the URA and will not reduce any URA benefits to which a business may be entitled. The assistance and supplemental benefits offered through this program will help minimize the inconveniences and financial impacts on businesses which are displaced by a CSO project.</p>
Jim Karle	Comments Lower Mill Creek Partial Remedy Proposal	See "Karle Comments on Revised Original LM CPR.pdf"	<p>The scope of the Regulators' review under Section A.2.a of the WWIP is limited to whether the proposed Revised Original LM CPR "provides equal or greater control of CSO annual volume as the Original LM CPR and is completed by the Phase 1 End Date." As explained in the response to Marilyn Wall's comments, Defendants' proposal meets these criteria. The cost-effectiveness analysis conducted by MSD indicates that the Revised Original LM CPR will be significantly less expensive for the public agencies and ratepayers as compared to the default tunnel-based remedy. The updated estimate of total project costs for the default remedy is \$414.4 million (2006\$) vs. \$244.3 million (2006\$) for the Revised Original LM CPR.</p> <p>Modeling and engineering analyses indicate that the implementation of the Revised Original LM CPR will likely meet the Performance Criterion of reducing CSO volumes by 1.78 billion gallons based on the "typical" rainfall year (1970). Post-construction monitoring and modeling will be required to determine if the Performance Criterion has in fact been met. If it is determined that the Performance Criterion has not been met, Defendants will</p>

Name	Subject	Comments	Responses
			<p>be required to implement additional measures to control additional volumes up to the point where the Performance Criterion is met. The consent decree and WWIP also require that Defendants implement additional measures during Phase II to further control CSOs into the Lower Mill Creek, to be followed by post-construction monitoring to determine whether those measures were sufficient to enable Defendants' CSOs to comply with the water-quality-based requirements of the Clean Water Act.</p> <p>See response to comments from Joe Smith regarding management of stormwater that will be separated out of the combined system under the Revised Original LM CPR. Stormwater control measures such as detention basins are included as part of the Revised Original LM CPR to help sustainably manage the separated stormwater. The stormwater system and discharges will be managed as part of the local MS4 program and is covered under a NPDES discharge permit issued by Ohio EPA.</p> <p>Additionally, the commenter expressed the view that CSO/wastewater funds, supported by rate-payers, should be used for CSO/wastewater projects for the benefit of the CSO service area as a whole, and should not be used to fund or finance City redevelopment. In the cost-effectiveness analysis of the Revised Original LM CPR for addressing CSOs in the Lower Mill Creek part of the overall service area, costs were estimated for the various elements of the LM CPR including the valley conveyance in the Lick Run/South Fairmont area. The costs included in the cost-effectiveness analysis included only costs necessary for the CSO system (including the conveyance of separated stormwater) to operate and for protection of public safety and water quality. The costs also include relocation-related costs associated with local residents and businesses that will need to move. The costs included in the cost-effectiveness analysis did not include city redevelopment costs such as promoting economic revitalization or new housing in the South Fairmont neighborhood.. Given that the updated estimate of total project costs for the default remedy is substantially higher than the Revised Original LM CPR, implementation of the Revised Original LM CPR may represent the more optimal return on investment for ratepayers.</p>

Name	Subject	Comments	Responses
Hershel Daniels Junior	U.S. EPA Seeks Public Comments on Lower Mill Creek Solution	See "Daniels Comments on Revised Original LMCPR.pdf"	The commenter expresses interest in bidding on some of the work that potentially will be carried out under the Revised Original LMCPR. Contractors selected for work under the Revised Original LMCPR will be selected through an open bidding process; qualified firms will be encouraged to bid on appropriate projects. The contractor offers the view that an anaerobic treatment system(s) may be an appropriate solution for meeting CSO control needs. Anaerobic wastewater treatment is generally not a proven technology for this situation. Anaerobic treatment systems are typically used for high-strength waste streams, and are less well-suited for CSO discharges. Also, large land areas are often needed for anaerobic treatment systems. Defendants evaluated alternatives for CSO storage and treatment, to reduce untreated CSO discharges, and found that the Revised Original LMCPR was the most cost-effective approach for meeting CSO reduction goals for the interim remedy.
Jim Casey	Lick Run Revised Original for MSD combined Sewer overflows	I just wanted to comment that I support the MSD project to daylight the stormwater and allow natural evaporation to solve the issue of the excess flows. I truly believe having an urban waterway will enhance the appearance and the value of our neighborhood. My only concern is that the MSD should be careful to maintain an adequate amount of water in the retention so that we will not have the appearance of a dry creek bed.	The Regulators acknowledge this expression of support for the Revised Original LMCPR. The valley conveyance in the Lick Run/South Fairmont service area will function as a naturalized stormwater conveyance. During and after storms rainwater will drain down the conveyance as an overland flow and will discharge to Mill Creek. Detention basins in the service area will hold water during storms, and will be partially de-watered after storms have ended. This will mean there will be water in the conveyance a good part of the time. However, in periods of dry weather it is not expected that there will be water flowing through the valley conveyance. The conveyance will be planted with deep-rooted native plants and will be maintained to present a naturalized aesthetic and avoid the appearance of a dry creek bed. .

Gerry and Marvin Kraus	Lower Mill Creek Partial Remedy, Dec. 18, 2012	<p>February 10, 2013 ECO: Environmental Community Organization Comments to USEPA on the Lower Mill Creek Partial Remedy, dated December 18, 2012</p> <p>The Lower Mill Creek Partial Remedy, is a very vague document and doesn't adequately address issues raised by community members affected by sewer overflows. That makes it both unenforceable and unlikely to achieve the benefits needed for our community.</p> <p>A specific example is Kings Run. ECO helped organizing meetings with the downstream affected neighbors, invited MSD to present their plans and respond to citizens' questions and concerns. While the submitted plan is too vague to tell what MSD is really doing, the following is apparent.</p> <p>Residents wanted green infrastructure, water reuse, stormwater from new developments to be contained on site, runoff from the abandoned Gray Road Landfill to be contained on site, erosion from the high volume overflows from overflow 217A to be addressed with stream restoration, to have a clean stream flowing through their property, rather than having their private property treated as a sewer pipe by MSD, which would also eliminate the ongoing stench.</p> <p>Unfortunately the plan still has sewage being discharged onto the downstream residents property, no green infrastructure except vague references to some future work that isn't funded and is unlikely to occur, vague reference to stream restoration, which one cannot even tell if it is in this phase or not.</p> <p>Kings Run, despite periodic extremely poor water quality, has the potential to be a high quality creek. Salamanders have been found during water quality surveys and the residents have maintained creek side habitat, critical for water quality.</p> <p>MSD's recommendations to the City of Cincinnati to include incentives and green infrastructure are short of what is needed. It is still illegal for some residents to disconnect downspouts and reuse water.</p> <p>MSD's plan represents the past, not the future and potential of Green Infrastructure. Given the amount of time and money MSD has had to evaluate Green Infrastructure and the requests of the citizens in</p>	<p>The scope of the Regulators' review under Section A.2.a of the WWIP is limited to whether the proposed Revised Original LMCPR "provides equal or greater control of CSO annual volume as the Original LMCPR and is completed by the Phase 1 End Date." As explained in the response to Marilyn Wall's comments, Defendants' proposal meets these criteria. The cost-effectiveness analysis conducted by MSD indicates that the Revised Original LMCPR will be significantly less expensive for the public agencies and ratepayers as compared to the default tunnel-based remedy. The updated estimate of total project costs for the default remedy is \$414.4 million (2006\$) vs. \$244.3 million (2006\$) for the Revised Original LMCPR.</p> <p>Modeling and engineering analyses indicate that the implementation of the Revised Original LMCPR is expected to meet the Performance Criterion of reducing CSO volumes by 1.78 billion gallons based on the "typical" rainfall year (1970). Post-construction monitoring and modeling will be required to determine if the Performance Criterion has been met. If it is determined that the Performance Criterion has not been met, Defendants will be required to implement additional measures to control additional volumes up to the point where the Performance Criterion is met. The consent decree and WWIP also require that Defendants implement additional measures during Phase II to further control CSOs into the Lower Mill Creek, to be followed by post-construction monitoring to determine whether those measures were sufficient to enable Defendants' CSOs to comply with the water-quality-based requirements of the Clean Water Act.</p> <p>It is important to note that, in addition to the Revised Original LMCPR that Defendants are required to implement in order to achieve the 1.78 billion gallon CSO reduction Performance Criterion, Defendants are also planning on implementing a number of non-WWIP required small de-centralized green infrastructure projects that provide further assurances that the required volume reductions are in fact achieved. These projects are not included in the \$244 million estimated cost for the LMCPR. As explained in the LMCPR Study Report, "source control at a small scale offers additional flexibility to engage the private sector and other public partners through Enabled Impact Projects (EIPs), which could provide a significant reduction opportunity for the Final Remedy." To date, MSD's Enabled Impact Program has successfully developed projects with approximately 30 public and private entities. In total the completed projects will capture over 40 MG of stormwater annually from the combined system.</p> <p>Stream and/or riparian restoration may indeed be a component of restoring aquatic life uses in the Kings Run watershed. However, CSO control measures should be implemented before the stream/riparian restoration is</p>

Name	Subject	Comments	Responses
		<p>Kings Run to work with MSD and the promise (unfulfilled) by MSD to include citizens in the design of the Kings Run solution, the end product is sadly disappointing.</p> <p>USEPA needs to make sure water quality goals will be met, that stormwater discharges do not contribute to pollution problems, that GI is used, and that the ratepayers' money is well spent.</p> <p>Comments submitted by Marvin Kraus, President, ECO, 315 West Court Street, Cincinnati, Ohio 45202</p>	<p>carried out. If restoration precedes the CSO control measures, it would be expected that the restored stream sections would be damaged by the continuing CSO discharges and the value of the restoration work would be lost.</p>

Robert Shockley	Lower Mill Creek Sewer Overflow Proposed Remedy Public Comment	See "Shockley Comments on Revised Original LM CPR.pdf"	<p>In the fall of 2012 public outreach and public comment opportunities on the Revised Original LM CPR were provided for by both MSD and the County. The County at that time raised a number of issues and questions about LM CPR modeling and preliminary recommendations. The CSO model was substantially updated and enhanced by MSD over the time period 2009 - 2012, and substantially different model outputs were produced (as compared to earlier versions of the model). During much of 2012 the Regulators and the County worked with MSD to review the model inputs, methods and outputs. The Regulators identified no "red flags" that would indicate the model results are unreliable. Monitoring has been done, and in fact is continuing, to verify and validate model results. The County approved the submittal of the proposed Revised Original LM CPR to the Regulators. Questions that had been posed by the County representatives were answered by MSD. See response to J Berns comment for further information regarding potential flood-related considerations. The proposed sewer separation projects and the Lick Run valley conveyance, which will have a floodway large enough to contain a once-in-100-years storm will reduce local flooding risks to a greater degree as compared with the default remedy. It can be expected that implementation of the Revised Original LM CPR, both in the short run and over the long-term, will require a number of partnerships. Collaborating partners potentially include the City of Cincinnati, Cincinnati Parks, State and local transportation agencies, and State and local economic development offices. MSD in fact has already entered into a Memorandum of Understanding with Cincinnati Parks. While it would potentially require up-front investments of time to establish partnership arrangements, these partnerships may prove to be valuable for local agencies, residents, and businesses. For example, by coordinating sewer projects with road repair/reconstruction projects (sewers are typically underneath roads) substantial savings can be realized and traffic disruptions can be minimized.</p>

Jacque Chischillie	Revised Original Lower Mill Creek Partial Remedy	<p>To whom it may concern I am hopeful that I did not miss the deadline for submitting this opinion.</p> <p>As a longtime resident of South Fairmount I have attended almost all of the meetings presented by the MSD. I understand that something has to be done to reduce sewer overflows into the Mill Creek so one option will need to be selected to satisfy the EPA consent decree. As I understand it we the citizens have two options.</p> <p>Option 1: Dig a very deep tunnel and use a large pumping station to convey large rainwater overflows deep under the Mill Creek,</p> <p>Option 2: Build a large lake and creek structure to daylight the rain water overflow which can then evaporate into the atmosphere,</p> <p>Both options will require substantial capital investment. Option 1 will require energy to drive pumps and treatment equipment. Option 2 will require ongoing maintenance to the newly created lake.</p> <p>Option 1 is the default option suggested by the EPA when they issued the consent decree.</p> <ul style="list-style-type: none"> · This option solves the problem by using an electrical energy to send the water deep underground. · The goal of reducing overflow is accomplished and the residents of South Fairmount are left with a status quo neighborhood. · In addition the natural path of the Lick Run remains permanently altered. <p>Option 2 is the MSD Revised Original to daylight the water. This option:</p> <ul style="list-style-type: none"> · Restores the Lick Run to its natural state and any additional rainwater can naturally evaporate. · Evaporation would be an environmentally friendly process that does not require any additional energy and has been part of proven solutions in many cities addressing this same issue. 	The Regulators acknowledge this letter of support for the Revised Original LMCPR.

Name	Subject	Comments	Responses
		<ul style="list-style-type: none">· A third auxiliary benefit would be to create a new urban green space that could be used to attract new investment to our neighborhood <p>As a lifetime resident I am writing this letter in support of the MSD daylighting option for the following reasons:</p> <ul style="list-style-type: none">· Daylighting and evaporation uses passive technology which will require the least energy going forward to accomplish the goal of reducing sewer overflows.· The project would be able to be scaled or modified should the need arise to reduce sewer overflows in the future.· This option restores the natural flow of the Lick Run, <p>I believe that returning waterways to their original state is consistent with providing a more sustainable urban living environment. The Hargrove Revised Original uses technology which has not been proven and might in the end fall short of reducing the overflow enough to meet the EPA decree. This could potentially result in fines which would be paid by the MSD customers.</p> <p>Let it be clear that there were many residents of South Fairmount who felt that the South Fairmount Community Council was excluding them from their decision-making and therefore were not represented by the Council in this matter. To this end, the former administration was voted out and an entirely new board was elected. This current board, of which I am a member, is in support of the Cincinnati MSD solution.</p> <p>Jacquie Chischillie</p>	
Marilyn Wall	Sierra Club comments on Lower Mill Creek Partial Remedy	See "Marilyn Wall Comments on Revised Original LMCPR.pdf"	See "Responses to Marilyn Wall Comments.docx"

<p>E. John Eck</p>	<p>More Green, Less Grey in the Lower Mill Creek Partial Remedy</p>	<p>See "Sierra Club comments.pdf"</p>	<p>The valley conveyance in the Lick Run/South Fairmont service area will function as a bioengineered stormwater conveyance. During and after storms rainwater will drain down the conveyance as an overland flow and will discharge to Mill Creek. Detention basins in the service area will hold water during storms, and will be partially de-watered after storms have ended. This will mean there will be water in the conveyance a good part of the time. However, in periods of dry weather it is not expected that there will be water flowing through the valley conveyance. The conveyance will be planted with deep-rooted native plants and maintained to present a naturalized aesthetic and avoid the appearance of a dry creek bed. Although habitat function is not a requirement under the WWIP, it is expected that the valley conveyance will provide habitat for a number of species. For example many small bird and butterfly species will likely find the deep-rooted native plants to be suitable habitat in the spring, summer and fall. However, because the conveyance will not have water in it all the time it is not expected that the conveyance can provide habitat for aquatic species (fish and aquatic macroinvertebrates).</p> <p>See the response to comments offered by Gerry and Marvin Kraus for further information regarding implementation of relatively smaller, decentralized green infrastructure practices as part of the LM CPR. Source control at a small scale offers additional flexibility to engage the private sector and other public partners through Enabled Impact Projects, which could provide a significant CSO reduction opportunity for the Final Remedy.</p> <p>Stormwater control measures are included as part of the Revised Original LM CPR to help sustainably manage the separated stormwater. For example, there will be eight detention basins in the Lick Run/South Fairmont service area that will detain stormwater to help slow the release of water to the stormwater system and Mill Creek, and help to reduce the concentrations of sediment, nutrients, and other pollutants in the stormwater. The stormwater system and discharges will be managed as part of the local Cincinnati MS4 program which is administered by MSD. It is important that structural and nonstructural BMPs be implemented to manage the separated stormwater, to ensure that as CSO issues are being addressed that a different water quality concern is not being created. The Lick Run stormwater quality modeling and assessment work undertaken by MSD estimates that the stormwater management measures planned in the Lick Run/South Fairmont service area could result in pollutant load reductions for total phosphorus (estimated 30% reduction), nitrogen-related nutrients (25% reduction), total suspended solids (61% reduction), and bacteria (59% reduction).</p> <p>The commenter encourages increased public involvement and citizen science in implementing green infrastructure improvements. MSD and the County conducted workshops and other public participation events and solicited</p>
--------------------	---	---------------------------------------	--

		<p>public comments on the LMCPR. See pages 102 -104 of the LMCPR Study Report. As specific projects are planned, designed, and implemented as part of the LMCPR, it is expected that Defendants will conduct targeted outreach to local residents and community groups and engage in dialogue about project parameters. It is important for local residents and business owners have opportunities for dialogue with public officials on CSO and stormwater projects that will involve construction of new facilities in their neighborhood.</p> <p>There are multiple opportunities at the local level for public participation in the review and evaluation of MSD capital projects, including projects under the Revised Original LMCPR. First, MSD capital projects are proposed during budget and legislative proceedings held by the Board of County Commissioners of Hamilton County (BOCCs). As noted in paragraphs C.5 and C.6 the approved Final WWIP, MSD's annual Capital Improvement Program (CIP) document is presented by MSD to the BOCC for approval, and the CIP documents are subject to public review and evaluation. The annual CIP document lists individual projects, details, and budgets. The CIP is available to the public and is considered and voted upon by the BOCCs in a public meeting. The individual Revised Original LMCPR projects will be part of this public process.</p> <p>Second, because the CIP does not authorize or appropriate funding for the specific contracts needed in the design and construction of MSD projects, a separate public approval process is followed. The BOCCs pass resolutions authorizing the design and construction of individual capital projects. This legislation is proposed by MSD and then considered and voted upon by the BOCCs in open, public proceedings consistent with Ohio Revised Code Section 305.99. Agendas for BOCCs meetings are posted on the County's web site and the BOCC's meetings on CIP and capital project legislation are open to the public. The consideration of and approval of the individual construction contracts for the Revised Original LMCPR projects will be part of this public process.</p> <p>Third, quarterly and annual status reports on MSD construction projects as required by the Consent Decrees, are submitted to the Regulators, and these reports are posted on the MSD Project Groundwork website. Paper copies of these reports may also be requested by calling, emailing or writing to MSD. The public may determine the progress of authorized projects by reviewing these reports.</p> <p>Additionally, MSD project-specific information, such as status, scheduling and costs, is posted on the Reporting page of the MSD Project Groundwork website http://projectgroundwork.org/projects/reporting.htm .This public information includes Allowance Project Reports, Level 1 Quarterly Reports,</p>
--	--	--

			<p>Level 1 Annual Capital Reports, and Monthly Reports. The most up-to-date project data is provided in the Monthly Reports directory, which provides information in a variety of formats, including District-wide, by watershed, and according to its planning status, design status and construction status. The public may request copies of these reports be sent to them via email, and questions about any of the construction projects may be emailed to MSD.</p> <p>Implementation of the Revised Original LMCPH during Phase I of Defendants' implementation of the WWIP will move the CSO program a long way toward Defendants achieving compliance with the water quality based requirements of the Clean Water Act. The Revised Original LMCPH establishes plans for achieving reduced CSO and for implementing sustainable practices for managing stormwater. Implementation of further CSO control projects during Phase 2 of the WWIP will provide another substantial increment of CSO control. Post-construction monitoring and modeling will be implemented to evaluate the performance of the CSO control measures and determine whether Defendants have achieved compliance with the Clean Water Act's water quality based requirements. Nothing in the approval action in any way changes or downgrades applicable water quality standards.</p> <p>To complement other CSO planning, modeling, and monitoring work being undertaken, in 2011 MSD contracted with the independent Midwest Biodiversity Institute to conduct a comprehensive assessment of the biological and water quality conditions of Mill Creek and its tributaries. The bioassessment results indicate that the Mill Creek watershed is a recovering system. It is expected that chemical and biological monitoring will be conducted in the future, to verify/validate model results, assess the effectiveness of constructed elements of the CSO control program, and to assess progress toward meeting water quality standards.</p>
